Paperback : 132 pages

Item Weight : 7.2 ounces

Dimensions : 6 x 0.33 x 9 inches

In a world increasingly defined by science and technology, the human experience is undergoing a profound transformation. The boundaries between the physical and the digital, the real and the imagined, are becoming increasingly blurred. As our understanding of the universe and our place within it evolves, so too must our understanding of poetry.

Randomly Moving Particles: Poems by Pitt Poetry Series is an anthology that explores the intersections of science, technology, and the human experience in contemporary poetry. The poems in this collection grapple with the challenges and opportunities presented by a world in which the boundaries between the natural and the artificial are constantly shifting.

The poets in this anthology use a variety of strategies to explore these themes. Some poets, such as Rae Armantrout and Forrest Gander, use scientific language and imagery to create poems that are both intellectually challenging and aesthetically pleasing. Others, such as Claudia Rankine and Tracy K. Smith, use more personal and narrative approaches to explore the ways in which science and technology shape our lives.

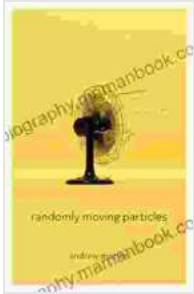

One of the most striking features of this anthology is its diversity. The poets included in this collection come from a wide range of backgrounds and experiences, and their poems reflect a variety of perspectives on the relationship between science, technology, and the human experience.

This diversity is one of the things that makes *Randomly Moving Particles* such a valuable contribution to the field of contemporary poetry. This anthology provides a unique opportunity to hear from a variety of voices that are shaping the future of poetry.

Here are a few examples of the poems included in this anthology:

- "In the Laboratory" by Rae Armantrout
- "The Life of Objects" by Forrest Gander
- "Citizen: An American Lyric" by Claudia Rankine
- "Incantatory" by Tracy K. Smith

These poems are just a small sample of the many excellent poems included in *Randomly Moving Particles*. This anthology is a must-read for anyone interested in contemporary poetry, science, technology, or the human experience.
